

LO SVILUPPO DEL CALCIO FEMMINILE IN ITALIA. ANALISI DEL FENOMENO E PROPOSTE CONCRETE PER IL SUO RILANCIO

di *Daniele Muscarà**

ABSTRACT: This paper reviews the early development of the autonomous women football in Italy. Currently the women in football are only amateurs and play under the rule and guide of the Football Amateurs League.

Following the start of the UEFA women football project to promote europewide development of this gender football, the Italian Federation of Football is promoting the creation of women professional football as a branch of existing professional football clubs.

The progress is slow but steady and the Italian football will see the gradual building of a women professional football in the long term, emulating the positive results showed in the other European countries, such as England, where the FA has built a successful female professional football league.

The author is hopeful that further reforms implemented by the sports authorities and by the state legislator will accelerate the expansion of the women football in Italy and will draw a merited public interest with commercial benefits.

Keywords: women football – professional and amateur football – ordinary law – sports law – reform.
